ENGINSIGHT AT SECURITY 2026 IN PRAGUE
DRIVING GROWTH IN CZECHIA AND SLOVAKIA: ENGINSIGHT SHOWCASES ITS EU-TAILORED CYBERSECURITY PLATFORM

Jena/Prague, February 4, 2026 – Enginsight, provider of an integrated all-in-one cybersecurity platform for small and mid-sized enterprises (SMEs), will participate in this year's SECURITY 2026 in Prague. The largest independent cybersecurity conference in the Czech Republic targets CISOs, security managers, IT directors, auditors, and technical security experts and will take place on February 4-5, 2026 at the O2 Universum.

Enginsight is leveraging its presence at SECURITY 2026 to further expand its market activities in the Czech Republic and Slovakia, with a platform tailored to the regulatory and operational needs of European enterprises. Representing the company on site are **Thomas Thoelke, Head of International Sales**, and **Lutz Wiechmann, International Senior Sales Manager**. Their goal is to strengthen existing relationships, initiate new partnerships, and support a sustainable market entry in the region. Participation in the conference is a key component of Enginsight's international growth strategy.

Building on a strong foundation, Enginsight has already established itself as a trusted cybersecurity partner in Germany and across the DACH region. The regulatory and technical expertise gained there, especially around NIS2, ISO 27001, and industry standards such as TISAX, underpins the rollout in the Czech Republic and Slovakia and reinforces the solution's credibility in a European context.

The Czech/Slovak region is one of the company's most important expansion markets in 2026. Enginsight is committed to a clear channel strategy and a long-term local footprint. An additional sales role for the market is already planned, and the position was recently advertised: https://jobs.enginsight.com/en?id=5262ad

Starting in February 2026, a new international Pre-Sales Engineer will strengthen the company's European operations.

REGULATORY MOMENTUM AS A GROWTH DRIVER: NIS2 IS RESHAPING THE MARKET

SMEs in the Czech Republic and Slovakia face the task of further developing their security infrastructures and implementing NIS2 requirements. However, many companies lack internal security teams as well as budgets for traditional, resource-intensive security deployments. Enginsight therefore pursues a positive and pragmatic approach: the platform simplifies cybersecurity for SMEs, making key security functions easily accessible and immediately deployable, even without large internal teams.

Thomas Thoelke emphasizes:
"Companies need security, not complexity. Many have neither their own security team nor the

resources to operate extensive security architectures. This is exactly where Enginsight comes in: we automate analysis, monitoring, and reporting and enable SMEs to achieve a professional security standard. Security that frees up teams and enables organizations to operate with confidence."

The solution enables NIS2 compliance without added overhead, delivers automated reports for auditors, and provides one-click risk assessments. It also supports ISO 27001 and - particularly relevant for many automotive and supplier companies - TISAX requirements through automated security analysis.

VALUE FOR CUSTOMERS - STRONG OPPORTUNITIES FOR FUTURE PARTNERS

Enginsight is committed to a long-term market development strategy in the Czech Republic and Slovakia, built on presence, exchange, and collaborative partnerships. The goal is to empower small and mid-sized enterprises (SMEs) to build a modern security infrastructure - automated, efficient, and resource-friendly.

Thomas Thoelke adds:
"SMEs must implement security, yet many lack both the staffing and the investment capacity for conventional SIEM or SOAR architectures. Enginsight delivers NIS2 compliance without overhead, automatically generated auditor reports, and one-click risk assessments. This is not only a major advantage for our customers - it is also a significant revenue opportunity for future local partners."

During SECURITY 2026, Enginsight will be available for personal conversations with numerous visitors. Interested companies and potential partners are invited to visit the booth to explore use cases of the platform and learn more about local growth plans.

ABOUT ENGINSIGHT

Enginsight provides a comprehensive cybersecurity solution for small and mid-sized enterprises (SMEs). Founded in 2017 in Jena, the fully in-house developed software is now used by numerous organizations across Europe. The all-in-one platform integrates vulnerability management, intrusion detection & prevention, automated penetration testing, SIEM, asset monitoring, **and automated defense mechanisms in a single solution.**

With the guiding principles **"Making the invisible visible"** and **"Turning insecure into secure"**, Enginsight combines transparency, automation, and a practical security architecture to protect SMEs efficiently and sustainably - **Cybersecurity 100% Made in Germany.**
